

To whom it may concern:

I am a Registered Nurse in a Florida medical practice. We treat patients with contagious diseases including influenza and corona virus. During the past year, none of our staff have become sick. In addition, we have not learned of any cases of human-to-human disease transmission among our patients.

The only explanation seems to be the new CDD air disinfection system that was installed around the time when our wonderful disease-free period began. In addition to promoting our personal health, the system has reduced odors and eliminated mold and mildew issues throughout our entire facility. Our building itself seems to be a healthier environment with better air quality.

We know that the system runs constantly 7x24x365 because it is not dependant on our heating and air conditioning system. We are grateful to our employers and feel safer in our workplace. My role as the primary RN is less stressful because absenteeism is reduced.

The design and performance of the system are brilliant!

Sincerely,
